Simple Notification Service (SNS) Basics 101

What is AWS Simple Notification Service (SNS) ?

- Amazon Simple Notification Service (Amazon SNS) is a web service that coordinates and manages the sending or delivery of messages to subscribing endpoints or clients
- In Amazon SNS, there are two types of clients, publishers and subscribers, also referred to as producers and consumers
- Publishers communicate asynchronously with subscribers by producing and sending a message to a topic, which is a logical access point and comm. channel

AWS SNS

What is AWS Simple Notification Service (SNS) ?

- Subscribers (i.e., web servers, email addresses, Amazon SQS queues, etc) consume or receive the message or notification over one of the supported protocols (i.e., Amazon SQS, HTTP/S, email, SMS,) when they are subscribed to the topic

In the next section ...

- I want to receive a notification (email) for any new object upload that takes place within my S3 bucket
- Deploy SNS for that !
